INTRODUCTION

Create and code a products page for a Home Decor website. This website sells home decor items for the kitchen, lounge, and bedrooms of a home.

- Use colour scheme and logo from Module Assignment 1.
- Take at least 3 photos for the product images for the page, using a camera phone or digital camera.
- Optimise these photos for the website.
- Choose 1 photo for use as a main/introduction photo on the products page, and include in the website page/code.

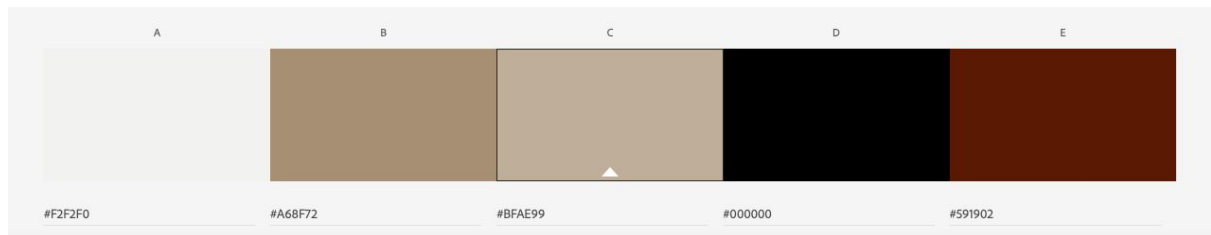

- Design and create 2 different icons for use on the page and include in the webpage code. The icons should also look good on smaller screen sizes.
- Style the main / introduction photo using one CSS filter.

BODY

2.1. Introduction

As the assignment says, i will be using the same colors, texture/pattern and logo from MA1.

So out of this colors and meanings about the colors, i choose this color pallet:

Textures/pattern: i choose to have the pattern as striped, with a brown and the with color from the color pallet:

Logo: HOME & DECOR

Images: Images before i edited them.

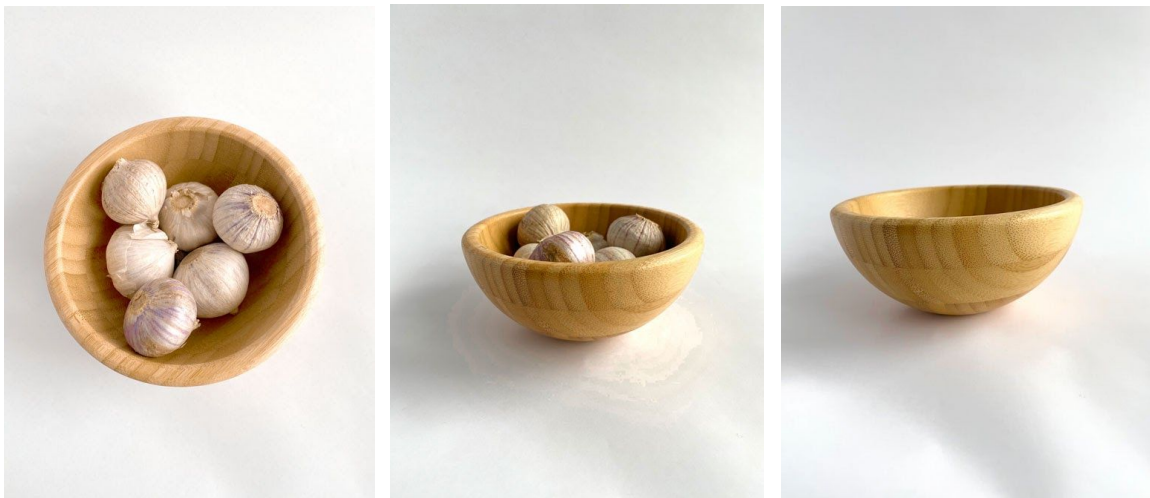

Images: After editing them

2.2. Main section of report

Editing images:

I used the Levels effect and the smart filter effect on the image, to get the background lighter and the product to “pop” a bit more. I increased the image to be underneath 200kb, since that is preferred in web pages. It is not much different, but you can still see the difference.

I choose to not edit the main product image, just the rest of the small product images.

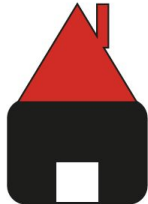

Icons: I made 2 icons, one for login and one for cart

I made them simple, so they also are good for smaller screens. I choose to make them in the same color as the background color I made from MA1.

The reason that I chose to make a login and cart, is because we made icons the first year at campus, then i made search, home, location and contact, comments and mail icons, so i wanted to make something i haven't done yet.

Home

Search

Location

Contact

Comments

Mail

I used the hover effect on the small images, so it looks like you can click on them. I also used filter contrast on the main image/ big image.

2.3. Conclusion

I think this assignment was a bit difficult to use the homemade icons, to position it perfectly. I can still see that it is not perfect, but I struggled a lot with it. I would appreciate it if you could come with some tips on how I can use homemade icons, and how to position it better for the future.

I feel more comfortable to use font-awesome's icons. I also want to know if I can make icons and use it in a `<i>` tag? what is the best way of making an icon, from illustrator and if the best solution is to save them as png, or if it is better to do it in another way.

images: camillareppen.no

Texture is from the curriculum, I just changed it to stripted instead of diagonal stripe effect.

css filter: <https://developer.mozilla.org/en-US/docs/Web/CSS/filter>
